

INTERNAL · SYSTEMS

Automation Architecture.

What is automated, where it runs, and what to check when something that should have happened did not.

PROGRAM

SUPERMIND TEAM

WHERE

OWNER · B. AMECHI

VERSION

V3.2 · SEPTEMBER 2026

THE MAP

What runs by itself

AUTOMATION	WHERE	TRIGGER	RESULT
Welcome message	Whop · Marketing · Support chats	A member joins	Private message pointing to Start Here, The Vault and the first post
Tier unlocks	Whop · product access	Sales threshold reached	Creator, Partner or Flagship folder opens
Comment to DM	ManyChat	A comment containing CLARITY	Public reply plus a DM carrying the link
Tracking links	Whop · Marketing · Tracking links	A click	Source recorded against the join
TikTok payouts	TikTok Shop	An order settles	TikTok pays the creator directly
Newsletter send	Scheduled by Pam	Send date	Issue goes out

Everything else is done by a person on purpose.

FAILURES

When something did not happen

SYMPTOM	FIRST CHECK	THEN
A new affiliate got no welcome	Whop · Marketing · Support chats · is the "user joined" automation enabled	Send the welcome by hand, then fix the automation
A promotion did not unlock	Does the sales total in the tracker meet the threshold	Grant access by hand and log it
A comment did not get a DM	Is the ManyChat trigger live and the Instagram account still connected	Reconnect, reply by hand meanwhile
A sale is missing	Which platform was it on, and which code was used	SM-SOP-15, the missing-sale path
TikTok commission looks wrong	The creator's TikTok dashboard, since TikTok owns that number	Escalate only if TikTok's own record disagrees with ours

Test after every change. An automation that silently stops is the most expensive failure in this program, because nobody notices for weeks.

MONTHLY

The standing test

On the first Monday of each month:

1. Join Whop with a spare account and confirm the welcome arrives. Note how long it took.
2. Comment the ManyChat keyword on a live post and confirm the DM lands.
3. Confirm one locked Vault folder still refuses a Member.
4. Confirm the tracking links still resolve.
5. Log the results in the L10 notes.

Full walk-through for a launch or a big change: SM-QA-01.
