

CONTENT · AI UGC CAMPAIGN GUIDE

Show them what good looks like.

A library of AI-generated, UGC-style content about Supermind — produced by staff at near-zero cost, on brand, at volume. Its first job is as a reference: the thing we send a new affiliate so they know what a good post looks like without us having to art-direct them. Its second job is filling the content calendar. There is one governance decision to make before any of it publishes, and it is on page three.

KEYS — REQUIRED BEFORE PUBLISHING PEOPLE

VERSION

V1.0 · SEPTEMBER 2026

PART 01

Why this is worth doing.

The hardest part of running a creator program is not recruiting. It is that a new affiliate opens the app, points the camera at a coffee bag, and has no idea what we want.

Telling them "be authentic, in your own voice" is true and completely useless on its own. Showing them fifteen examples of what a good Supermind post looks like — framing, light, pacing, the kind of thing that gets said — closes that gap in thirty seconds.

Producing fifteen real examples with real people costs thousands and takes weeks. Producing them with AI costs almost nothing and takes an afternoon, which means we can make them **specific to each lane**: one set for the fitness creator, one for the recipe creator, one for the woman filming her first hour before work.

PART 02

The production system.

Every generation uses the SUPERMIND AI Prompt Guideline v1 blocks that already exist. That document is the engine; this one is the campaign plan that drives it.

THE PROMPT STACK

Write the scene in one or two sentences, then paste the standing blocks after it. Always: **THE WORLD + CASTING + COLOR & LIGHT + one VISUAL MODE + NEGATIVE PROMPT**. Add CINEMATOGRAPHY for motion.

CASTING DIRECTION FOR THIS CAMPAIGN

Per the audience decision, the AI UGC library leads with **Black women, 25-45** — composed, put-together, intelligent, aspirational. Natural skin texture, real hair, no artificial smoothing. Relaxed authority rather than excitement. Men

THE FOUR USES, RANKED BY VALUE

USE	VALUE
1 • Reference library for affiliates	Highest. Sent with the welcome email and built into the orientation course. Fully internal — no governance question at all.
2 • Product and still-life content	High. Packaging on marble, the pour, the vessel in a green room. No people, no risk, publishable subject to normal brand approval.
3 • Ambient b-roll and environments	High. Coffeehouse interiors, morning light, trail scenes. Backdrop material for text posts and newsletter headers.
4 • UGC-style content featuring people	Highest reach, and the one with a decision attached. See Part 03.

STAFF TASK, NOT AN AGENCY LINE ITEM

This is exactly the kind of work that fits inside Celina's hours: batchable, repeatable, judged on volume and consistency rather than inspiration. One production session a month yields a quarter of reference material.

THE FIRST BATCH — 20 ASSETS, ONE SESSION

SET	COUNT	WHAT
The First Hour	5	A woman's morning: the pour, the notebook, light coming up, the first sip, the desk. Analog Archive mode.
Product still-life	4	Pouch on green marble, gold vessel with olive shadow, chocolate broken open, the full vessel lineup. Luxury Laboratory.

appear in the training and outdoor sets, weighted toward the lanes Keys owns.

THE RULE THAT KEEPS IT ON BRAND

- **Never let a model draw the wordmark.** Generate without packaging text, composite the real mark in post. Non-negotiable — a hallucinated logo is the fastest way to look fake.
- **One committed light source.** Warm practicals for archive scenes, natural daylight for living scenes.
- **Shadows lean warm brown and burgundy, never grey.**
- **One intentional idea per frame.** Clutter reads as AI.

The Recipe	3	Iced build, cacao preparation, chocolate in a dish. Living Intelligence.
Ritual in motion	4	Trail at golden hour, gym before the session, long table gathering, evening wind-down.
Environments	4	Coffeehouse interior, plant-filled room, marble counter, bonfire at dusk. B-roll and header material.

CADENCE AND STORAGE

- **One session a month**, 20–30 assets, themed to the coming month's campaigns and newsletter pillars.
- Filed in a shared drive by set, named SM-AI-[set]-[nn]-[month].
- Every asset tagged **internal reference** or **approved for publication** in the filename. No exceptions — this is how the governance line stays visible.

The decision that has to be made before any of it publishes.

THE CONFLICT, STATED PLAINLY

World Bible Edition 02 currently says generated imagery is internal art direction unless a publishable tier is agreed with Keys, and that synthetic humans presented as real people should not publish. The most useful version of this campaign — AI UGC that reads as a real person talking about the product — sits directly against that rule as written. That is not a reason to abandon it. It is a reason to get the rule updated deliberately rather than quietly breaking it.

THE TWO TRACKS

	TRACK A — BUILD NOW	TRACK B — NEEDS SIGN-OFF
What	Reference library, product still-life, environments, b-roll. People may appear but the asset never claims to be someone's testimonial.	UGC-style content where a generated person appears to be a real customer sharing an experience.
Governance	Fully allowed today. Internal art direction is exactly what Edition 02 permits.	Requires Keys to agree a publishable tier and to decide the disclosure position.
Risk	None beyond normal brand approval.	Two real ones — see right.
Start	This month.	After the Keys session.

Recommendation: build Track A immediately — it delivers most of the value with none of the exposure, and the reference library is the highest-value use anyway. Bring Track B to Keys as a specific proposal with examples in hand rather than as an abstract question.

THE TWO RISKS WORTH NAMING

- **The endorsement problem.** A generated person presented as a customer describing their experience is a testimonial from someone who does not exist. Regulators treat fabricated endorsements as deceptive, and the standard applies to the impression created, not the technology used. Product scenes and lifestyle b-roll are not endorsements; a face saying "this changed my mornings" is.
- **The brand problem, which is bigger.** Authenticity is the value we ask every affiliate to lead with. If our own feed is synthetic people performing sincerity, that is the story if anyone notices — and the audience most likely to notice is the one we are trying to win.

THE SAFE MIDDLE, IF KEYS WANTS TRACK B

- Generated people in **lifestyle scenes**, not testimonials. She is in the frame with the cup; she is not telling you it fixed her focus.
- **No first-person claims** from any generated face, spoken or on-screen.
- An **AI-made or AI-assisted label** where the content could reasonably be read as real. It costs nothing and it turns a liability into a point of confidence.
- **Real people carry every testimonial.** That is what the affiliate program is for — we have 23 of them and are about to have 250.

How the library gets used.

WHERE	HOW	OWNER
The welcome email	"Here's what a good Supermind post looks like" — five reference images matched to the lane they signed up in. The single highest-impact placement.	Celina

The orientation course	A module per visual mode, with reference stills beside the explanation of why each one works.	Amechi
Challenge briefs	Every monthly challenge ships with three reference frames so nobody has to guess at the format.	Celina
Newsletter headers	Environment and still-life assets as issue art, matched to the pillar.	Pam
Instagram grid fill	Product and environment posts between creator reposts, so the grid stays composed on slow weeks.	Steve
Pitch and partnership decks	Showing a prospective partner what a collaboration would look like before anything is shot.	Amechi

WHAT GOOD LOOKS LIKE — THE QUALITY BAR

- Would this pass as a photograph someone actually took? If it looks rendered, it fails, no matter how pretty.
- Is there exactly one idea in the frame?
- Does the light have a source you can point to?
- Is the wordmark composited, not generated?
- Would this sit comfortably in the World Bible's feed law?

MEASUREMENT

Metric	Target
Assets in the library by Dec 1	60+
Production time per batch	Under 3 hours
New affiliates receiving references	100%
Challenge briefs with reference frames	100%
Track B decision	Made by Sept 15
